Ruben Versantvoort

Test Automation Engineer · Former Frontend Architect

Weert, Netherlands (working in Eindhoven) linkedin.com/in/ruben-versantvoort-ba12151a3
github.com/ruben-codes-ts

Software engineer who moved from building systems to proving they work. After five years as a web developer and frontend architect at GoodHabitz, I now own the company's end-to-end test platform: a Playwright suite that gates deploys across our product teams, with change-scoped CI, severity-based scheduling and Grafana reporting. I build AI agents that repair test drift and triage nightly failures, with guardrails that keep a human in charge of every merge.

EXPERIENCE

GoodHabitz, Eindhoven — Feb 2020 – present

Test Automation Engineer — Apr 2025 – present

- Own the company-wide Playwright E2E platform (TypeScript, Page Object Model) covering every major product area, and wrote nearly all of its code.
- Made E2E a deploy gate for our product repositories on staging and production, with run-origin tracking in Grafana.
- Built change-scoped merge request pipelines that run only the tests a change affects, with a floor of blocking tests for broad changes.
- Designed a severity model (blocking / degraded / cosmetic) that drives daily smoke runs and weekly regression runs per environment.
- Built Grafana and Loki reporting (code-generated dashboards covering health, trends and flakiness) plus Slack failure alerts, and reused it for a second suite.
- Built AI test-maintenance tooling with Claude Code and the Playwright MCP: an agent that diagnoses and repairs failing tests, and a nightly triage run that opens small, reviewable fix MRs.
- Co-developed agent workflows that generate tests from AIO test cases, and proved by live API probes how results link back to the test management system.
- Scaffolded the Experts E2E suite (repository as code in OpenTofu, CI, reporting, first authenticated tests).
- Wrote the organisation's testing guide for non-QA engineers (test layers, triggers, schedules, severity).
- Added SonarCloud and Trivy security scanning to CI and resolved critical dependency CVEs.

Frontend Architect — Jan 2023 – Apr 2025

- Founded the end-to-end test platform (2024) to centralise testing that was scattered across many repositories and give the organisation one place to control release quality.
- Designed and built multi-language SCORM export for courses and assessments, still sold to customers as a paid add-on.
- Shaped the frontend architecture and the backend-for-frontend layers that serve it (TypeScript, Node.js).

Web Developer Feb 2020 – Jan 2023

- Built features for my.goodhabitz.com, the learning platform customers use every day, which is still in production (JavaScript, React, Node.js).

Dcentralized, Eindhoven 2019 – 2020

React Developer (internship, Avans)

- Built React front-end features in a small product team.

Apostel 2017 – 2020

Bartender

- Fast-paced, customer-facing work alongside my studies.

PROJECTS

limburggymnastics.nl

Production website for a regional gymnastics foundation, built from a designer's mockups with Nuxt, Tailwind and Decap CMS. Migrated the domain from a WordPress host with zero email downtime, and handed it over so the club edits its own content.

EDUCATION

HBO-ICT, Avans Hogeschool 2016 – 2020

Completed propedeuse and internship; left to join GoodHabitz full-time.

SKILLS

Testing	Playwright · end-to-end testing · visual regression · test architecture · flake analysis · AIO Tests
Code	TypeScript · JavaScript
CI & ops	GitLab CI · Grafana · Loki · SonarCloud · Trivy · OpenTofu · Netlify
AI	Claude Code · MCP agents · Playwright MCP
Web	React · Vue · Nuxt · Node.js · Tailwind

LANGUAGES

Dutch (native) · English (fluent) · German (good)
